

# ADHD

Jonathan Lopez 9th period

# ADHD Definition

It is usually first diagnosed in childhood and often lasts into adulthood. Children with ADHD may have trouble paying attention, controlling impulsive behaviors , or be overly active. It can make it hard for most kids not to listen or sit still during a discussion.

# Symptoms

**inattention** : not being able to keep focus, hyperactivity: excess movement that is not fitting to the setting and impulsivity: hasty acts that occur in the moment without thought.

# Treatment

Behavioral therapy, Stimulants, and non stimulants, antidepressants, Psychostimulants.

# medication

- Ritalin,
- Adderall
- Dexedrine
- Focalin
- Vyvanse

# Facts

It is one of the most common disorders in people's childhoods, and it is also one of the most easiest ones to deal with.
